# README.md

---

We've got to the most pleasing part, to the icing on the cake of the web development — designing your repository. When publishing a project, you have to make an introduction. A good introduction gives other web developers and potential employers an immediate understanding of what your repository contains.

## One More Language in Your Arsenal

The first thing you notice opening a repository is the readme. Every web developer creates a unique readme, for example:

To add it you just have to create a `readme.md` file in the root of the repository.

`.md` is a markdown extension, named for a special markup language, called Markup. Oh yeah! Now, time to immerse yourself in the syntax of another markup language. It's like HTML, but different. Here's the basic syntax for you to write fancy descriptions to repositories:

MARKDOWN

```
# H1
## H2
### H3
#### H4
##### H5
##### H6
```
